Dear Hiring Manager,

I'm writing to apply for the [Position] role at [Company]. I'm a full-stack developer and a recent Computer Science graduate from UT Dallas, and what I most want next is exactly what your team offers: real professional experience, working alongside engineers I can learn from.

Most of what I know, I learned by shipping something people depend on. I designed and built **bipbipdrivingschool.com**, the production site for a licensed North Texas driving school that had no way to show its courses online. Because the school's students are split between English and Spanish speakers, I built the site fully bilingual from a single codebase — every course page, form, and legal notice comes from a shared content layer, so the owner updates copy once and both languages stay in sync. I structured the course catalog, schedules, and pricing in Supabase so the staff can change offerings without touching code, designed the site around the Texas Department of Licensing and Regulation requirements for driver education providers, and made it mobile-first after seeing that nearly all of the traffic came from phones. The stack was Next.js, React, TypeScript, and Tailwind on Postgres. I owned all of it: the client conversations, the design, the schema, the code, and the deploy.

That project taught me the most valuable thing I could have learned on my own — and also showed me the limits of working on my own. I made every architectural call myself, with no one to push back on it, and I'd like to change that. I want code review, design discussions, and the chance to learn a codebase I didn't write. I've done collaborative work I'm proud of on smaller projects — building the React front end and Clerk-secured Express API for The Review Mediator alongside teammates — and it was the part I enjoyed most.

Beyond the stack, I'm fully bilingual in English and Spanish, comfortable translating between technical and non-technical people, and used to being the one who explains a system to the person who has to use it. I'd bring that to your team along with a genuine eagerness to be mentored and to contribute wherever I'm most useful.

Thank you for your time and consideration. I'd welcome the opportunity to talk about how I can help your team, and you can see my work at miguelafernandezf.com.

Sincerely,

Miguel Fernandez
