

MIGUEL FERNANDEZ

FULL-STACK WEB DEVELOPER

Carrollton, TX | (469) 758-7608 | asteriofinol@gmail.com
miguelafernandezf.com | github.com/Mr-A-5 | linkedin.com/in/miguel-fernandez-0658ab242

Full-stack developer who has shipped a live business site end to end — design, bilingual content architecture, database, and deploy. I work primarily in TypeScript, React, and Next.js on top of Postgres, and I care about interfaces that hold up on the phones people actually use. Recent Computer Science graduate from UT Dallas looking for a team where I can grow as an engineer.

FEATURED PROJECT

Bip Bip Driving School — Bilingual Driver Education Platform

bipbipdrivingschool.com

[Next.js](#) · [React](#) · [TypeScript](#) · [Tailwind CSS](#) · [Supabase \(PostgreSQL\)](#)

A licensed North Texas driving school had no way to present its courses online, and its customers are split between English and Spanish speakers. I designed and built the production site that is now the school's storefront and enrollment funnel — sole developer, from client requirements through deployment.

- Built a fully bilingual (Spanish / English) course site from a single codebase: every page, form label, and legal notice comes from a shared content layer, so the school updates copy once and both languages stay in sync instead of drifting apart.
- Designed the site to satisfy Texas Department of Licensing and Regulation (TDLR) requirements for driver education providers — school license details, approved course and curriculum information, instructor credentials, and required student disclosures, presented clearly in both languages.
- Modeled the course catalog, schedules, pricing, and translated content in Supabase (PostgreSQL) so non-technical staff can change offerings without a developer or a redeploy.
- Took a mobile-first approach after seeing that nearly all traffic arrives on phones: responsive layouts, tap-friendly targets, and accessible contrast from a 360 px screen up through desktop.

ADDITIONAL PROJECT

The Review Mediator

[TypeScript](#) · [React](#) · [Express](#) · [Supabase](#) · [Clerk](#)

- Full-stack platform that lets businesses file and track disputes over online reviews. Built the responsive React front end, wrote authenticated Express API endpoints secured with Clerk, and helped design the Supabase schema behind them.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS, Vite, React Native, responsive & accessible UI

Backend & Data: Node.js, Express, FastAPI, Supabase, PostgreSQL, REST API design, Clerk authentication

Tools & DevOps: Git, GitHub, Docker, Vercel, Postman, Figma

Other: Fluent Spanish and English (native bilingual), localization, teamwork and client communication

EXPERIENCE

Bilingual Receptionist — Tax Mart

Dallas, TX · Feb 2025 – May 2025

- Served as the English/Spanish bridge between clients and staff, translating in person and making sure Spanish-speaking customers understood the services they were signing up for.
- Maintained confidential client records and verified filing paperwork for accuracy before submission, working under company privacy policy.

EDUCATION

B.S. in Computer Science — The University of Texas at Dallas, Richardson, TX

2024 – 2026

A.S. in General Studies — Collin College, Plano, TX

2022 – 2024
